2027 GRADUATE HIRING | GROWTH ENGINEER ROLE

OPTION 3: AEO, SEO AND GEO VISIBILITY ENGINE

Seven-day individual assessment | Option 3 of 4 | Search, answer engines and AI assistants

Goal: Make IncuBrix the brand that Google ranks, answer boxes quote, and AI assistants recommend when creators ask how to make and grow content. Measure where IncuBrix stands today, ship ready-to-publish fixes and pages, and build a tracker IncuBrix can rerun every week.

Key terms: In plain words: SEO means ranking in search results. AEO means being the direct answer (featured snippets, 'People also ask', voice answers). GEO means being named and cited by AI assistants such as ChatGPT, Gemini, Perplexity, Claude, Copilot and Google AI Overviews.

1. What you must deliver

Part	Required outcome
Product and market insight	Use the product. Submit 5 observations and the 3 biggest search and AI-visibility opportunities.
Visibility baseline	100 real questions creators ask. For each: IncuBrix's Google position, whether an answer box or AI Overview appears and who it quotes, and whether at least 4 AI assistants mention or cite IncuBrix and which competitors they name. Measure on 2 different days.
Technical fixes	Audit incubrix.com: indexing, speed, mobile, metadata, structured data, sitemaps, robots.txt, llms.txt and internal links. Submit 20 prioritised fixes with ready-to-paste code or text, each validated.
10 publish-ready pages	Answer-first pages (how-to guides, comparisons, FAQ hub or glossary) targeting your best opportunities, with structured data, sources and internal links.
Citation plan	30 specific third-party pages that search results and AI assistants already cite for these questions (articles, lists, directories, review sites, community threads), with the reason and the angle to earn a mention.
Visibility engine	A tracker that reruns the question set on Google and the AI assistants, stores raw answers, scores visibility and creates a weekly report, plus a brief generator for new pages.
Launch kit	90-day plan: what to fix and publish each week, owners, tools, and targets for rankings, answer share, AI mention rate and organic sign-ups.

2. Scope

- Questions creators ask about making, repurposing, editing, captioning, publishing and growing content with AI, plus comparison questions (for example 'best tool for ...' and 'X vs Y').
- English. Measure the United States plus at least 2 other markets, and record the location setting for every check.
- You do not need access to IncuBrix's website or Search Console. IncuBrix will apply your fixes and publish your pages.

3. When the work counts as valid

Each item counts only when it passes every check below.

Check	Simple requirement
Real questions	Each question comes from a recorded real source (search suggestions, keyword tools, forums, community threads, 'People also ask'). Invented lists do not count.
Reproducible	Date, location, tool or assistant, and the raw answer or screenshot are stored for every check. AI answers are checked at least twice because they vary.
Correct fixes	Each fix names the page, the problem, the evidence and code that passes a validator (for example Google's Rich Results Test).
Helpful content	Accurate and original, answers in the first 2 sentences, cites sources, no keyword stuffing, and every product claim is verified in the product.
Implementable	IncuBrix can paste or publish it without rework.

Minimum result: 100 questions measured on Google and 4 AI assistants on 2 days; at least 85% of IncuBrix's 20-item random audit can be reproduced; 20 validated fixes; 10 publish-ready pages; 30 citation targets; and the tracker reruns successfully during the live review.

SUBMISSION AND EVALUATION

4. Submit these five items

Item	What to submit
1. Submission Workbook	Complete the Excel workbook for your option. Yellow cells are your inputs; green cells calculate. Fill in the Self-check tab with a link to evidence for every claim.
2. Main output	A visibility folder with visibility.csv (one row per question, same columns as the workbook), raw answers and screenshots, the 20 fixes with code, the 10 pages and the citation plan.
3. Engine	Private repository or shared folder with your code or workflow, configuration, tests and a README with one clear run command. Do not include passwords or secret keys.
4. Launch kit	One document IncuBrix can act on next Monday: step-by-step plan, owners, tools, budget, targets and risks. Nothing should need rework.
5. Two short videos	Unedited. (a) Product walkthrough, up to 5 minutes. (b) Technical demo, up to 8 minutes: one normal run, a refresh on new input, and recovery from one simple failure.

5. How IncuBrix evaluates

Area	Points	What full marks look like
Product and market insight	10	Specific observations backed by evidence, and growth opportunities IncuBrix can act on.
Measurement, fixes and content	35	Measurement is real and reproducible (12), fixes are correct and well prioritised (11), and pages are genuinely helpful and ready to publish (12).
Automation and scale	20	Another person can run your engine from the README. It refreshes, avoids duplicates, logs errors and shows runtime and cost at scale.
Launch readiness	10	IncuBrix could start next Monday from your launch kit with no rework: clear steps, owners, budget and targets.
Live review	25	You trace random items back to evidence, run your engine on a new input we give you, and explain your decisions honestly.

Final result: below 65 = not selected | 65-74 = hold | 75-84 = strong hire | 85+ = exceptional hire, only when all exceptional requirements also pass.

6. How we check your work

- IncuBrix recalculates every number from your files. Totals typed into the workbook are not official.
- We pick 20 items at random from your main output (you cannot choose or replace them) and check each one against the quality bar.
- We run your engine ourselves, using only your README.
- Live review (45 minutes): you trace 5 random items back to their evidence, run your engine on a small new input we give you, and explain one decision you would change.
- A growth reviewer and an engineering reviewer score separately. Any change to a score must point to evidence.

7. Exceptional result

- 300 questions measured, with at least 90% of our audit reproducible.
- 20 publish-ready pages, plus a programmatic page template with data for at least 100 quality-checked pages.
- A before-and-after test on a site you own showing a measured gain in rankings or AI mentions.
- The tracker runs on a schedule and alerts when visibility changes.

8. Tools and integrity rules

- Use any AI tool, data source or service, free or paid. List them all in the workbook. No paid tool is required, and IncuBrix does not refund costs unless agreed in writing first.
- Work on your own. Disclose any manual work and where AI helped.
- Do not post on forums, edit third-party pages, or contact site owners. Do not use link schemes, fake reviews or hidden text.
- No fake, bought or guessed data, contacts, followers, engagement or results. Do not scrape against a site's terms, bypass logins or use private or leaked data.
- Follow privacy and marketing laws (for example India's DPDP Act, GDPR and CAN-SPAM) and every platform's rules.
- Made-up evidence, or being unable to explain and rerun your own work, disqualifies the submission.

- If a product feature or source is unavailable, record it with the date, time and evidence. You are not expected to work around restrictions.

Final check: Before submitting, confirm: 5 observations, 3 opportunities, 100-question baseline on 2 days, 20 validated fixes, 10 pages, 30 citation targets, a repeatable tracker, launch kit, completed workbook, visibility.csv, README, repository access and both video links.
